

Colaboración Ágil

Waterfall Project Management

- Requiere planeamiento detallado y alto grado de detalle.
- Los requerimientos fijos y bien entendidos desde el principio, pero los requerimientos y tiempos son variables
- Es una forma de manejo predictivo de proyectos.

Problemas:

- Los cambios tardíos generan ciclos de replanteamiento y causa retrasos y sobrecostos.
- Diferencia entre los ambientes de desarrollo, prueba y productivo.
- Diferencias entre el hardware en la distintas etapas.
- Falta de replicabilidad.
- Incapacidad para respuesta rápida a cambios.

Propuesto originalmente por WW Royce en 1970, revisado por B. Boehm en 1980 y por I. Somerville en 1985

Valores y Manifiesto Agil

Principios

- Our highest priority is to satisfy the customer through early and continuous delivery of valuable software.
- Welcome changing requirements, even late in development. Agile processes harness change for the customer's competitive advantage.
- Deliver working software frequently, from a couple of weeks to a couple of months, with a preference to the shorter timescale.
- Business people and developers must work together daily throughout the project.
- Build projects around motivated individuals. Give them the environment and support they need, and trust them to get the job done.
- The most efficient and effective method of conveying information to and within a development team is face-to-face conversation
- Working software is the primary measure of progress.
- Agile processes promote sustainable development. The sponsors, developers, and users should be able to maintain a constant pace indefinitely.
- Continuous attention to technical excellence and good design enhances agility.
- Simplicity – the art of maximizing the amount of work not done – is essential.
- The best architectures, requirements, and designs emerge from self-organizing teams.
- At regular intervals, the team reflects on how to become more effective and then tunes and adjusts its behavior accordingly.

Scrum

XP & Scrum/XP hybrid

Kanban

Principios

- Iniciar con lo que se sabe ahora.
- Acuerdo para seguir incrementalmente.
- Cambio evolutivo.
- Fomentar actos de liderazgo en todos los niveles.

Prácticas

- Visualizar
- Limitar el trabajo en proceso.
- Manejar el flujo.
- Hacer explícitas las políticas
- Implementar ciclos de reglamentación
- Mejorar colaborativamente y evolucionar experimentalmente

- No define roles ni equipos.
- Hay un flujo continuo en vez de sprints.
- Funciona mejor para trabajo no planeado o difícil de estimar
- Múltiples ciclos de retroalimentación:
 - Trimestral: Strategy reviews
 - Mensual: Operations & risk reviews.
 - Quincenal: service delivery review.
 - Semanal: replenishment review.

DataOps Manifesto and Principles

Agile Manifesto

- **Individuals and interactions** over processes and tools
- **Working software** over comprehensive documentation
- **Customer collaboration** over contract negotiation
- **Responding to change** over following a plan

DataOps Manifesto

- **Individuals and interactions** over processes and tools
- **Working analytics** over comprehensive documentation
- **Customer collaboration** over contract negotiation
- **Experimentation, iteration, and feedback** over extensive upfront design
- **Cross functional ownership of operations** over soiled responsibilities

Recoge las diferencias
entre desarrollo de software
y data analytics

Principios

- Continually satisfy your consumer.
- Value working analytics
- Embrace change
- It's a team sport.
- Daily interaction
- Self-organize
- Reduce heroism
- Reflect
- Analytics is code
- Orchestrate
- Make it reproducible.
- Disposable environments
- Simplicity
- Analytics is manufacturing
- Quality is paramount
- Monitor quality and performance
- Reuse
- Improve cycle times

Analytics Lifecycle

Agile DataOps Practices

Ideation	Feasibility	Analyze	Backlog	Develop	Done
No limit	WIP limited	WIP limited	No limit	Team WIP limits	No limit
Big ideas: • New product & feature creation opportunities • Customer experience enhancements • Business efficiency improvements • Improvements to existing solutions	• Epic hypothesis statement • Rough sizing of effort • Benefit estimation • Prioritization matrix	• Investigate alternative solutions • Refine cost and benefit estimates • Define minimum viable product (MVP) • Measurement plan developed • Prioritize	• Epics selected for development by Lean portfolio management team • Continuous prioritization of epics	• Epics broken into work items, stories or tasks • Teams begin development when they have capacity • Epic tracking	• Benefit measured versus plan • Stop or persist decision made

Agile DataOps Practices

Structure	Description	Example
Achieve	Sstrategic theme objective	Compliance goal
Though	Target portfolio outcome	Improved anti-money laundering (AML) risk assessment
For	Costumers	Money Laundering Reporting Officer (MLRO)
By	Proposed solution	Applying machine learning to automatically monitor customer transactions data to identify anomalies for investigation
Resulting in	Predicted benefit	Reduced risk of fines
Measured by	Metrics	Value of AML penalties relative to peers
Partnering with	Other teams and partners	Compliance and IT teams
Integrating	Sources and data types	Financial transactions and customer identity data
And requiring	Non-functional requirements	Ability to scale and match transaction volumes, and achieve 99.99% availability
