

EXAM BLUEPRINT

TABLE OF CONTENTS

THE CAP-ESSENTIALS (CAP-E) EXAM BLUEPRINT EXPLAINED	5
CAP-E EXAM BLUEPRINT	6
DOMAIN I: BUSINESS PROBLEM (QUESTION) FRAMING	
Task 1.1: Develop an initial statement of a business problem (question)	7
Task 1.2: Identify all stakeholders and their perspectives	7
Task 1.3: Determine if the business problem (question) is amenable to an analytics solution	8
Task 1.4: Refine the initial business problem (question) statement until it is clear and concise	8
Task 1.5: Create an initial business case for a solution to the business problem (question)	8
Task 1.6: Obtain sponsor agreement and stakeholder alignment on the business problem (question) statement	9
DOMAIN II: ANALYTICS PROBLEM FRAMING	
Task 2.1: Reformulate the statement of the business problem (question) as an analytics problem statement	10
Task 2.2: Develop a proposed set of drivers/inputs and determine how they relate to outputs	10
Task 2.3: State the set of assumptions related to the analytics problem	11
Task 2.4: Define primary measures of success	11
Task 2.5: Identify baseline performance of the current state	11
Task 2.6: Identify risks and mitigation strategies for an effective potential analytics solution implementation	12
Task 2.7: Obtain sponsor agreement and stakeholder alignment on the Analytics Problem Framing	12

TABLE OF CONTENTS (CONTINUED)

DOMAIN III: DATA

Task 3.1: Identify and prioritize data needs	13
Task 3.2: Identify and analyze data sources, including data structures	14
Task 3.3: Create a data management plan.	14
Task 3.4: Acquire data	15
Task 3.5: Clean, harmonize, transform, merge/join, and validate data	15
Task 3.6: Assess data quality and identify relationships in the data	15
Task 3.7: Document and report data findings (e.g., data quality, impact analysis, results, data management plan)	16
Task 3.8: Validate and update the business and analytics problem statements	16

DOMAIN IV: METHODOLOGY (APPROACH) SELECTION

Task 4.1: Determine available and appropriate methods/techniques for the identified problem.	17
Task 4.2: Evaluate and select methods/techniques, given the resources and available data	17
Task 4.3: Understand the technical solution architecture.	18
Task 4.4: Evaluate and select the technology stack	18

DOMAIN V: ANALYTICS/MODEL DEVELOPMENT

Task 5.1: Design the model structure.	19
Task 5.2: Build one or more appropriate model(s).	20
Task 5.3: Run, verify, and evaluate the model performance and outputs	20
Task 5.4: Calibrate model and improve data applicability based on client input	21
Task 5.5: If necessary, integrate multiple models.	21
Task 5.6: Document and communicate model findings, including assumptions, limitations, and constraints	21

TABLE OF CONTENTS (CONTINUED)

DOMAIN VI: DEPLOYMENT

Task 6.1: Perform business validation of the analytics solution	22
Task 6.2: Deliver business validation report with findings	22
Task 6.3: Obtain sponsor agreement and stakeholder alignment on moving forward with deployment	23
Task 6.4: Create requirements for a deployed analytics solution including model, usability, system, and business	23
Task 6.5: Actively support the implementation and testing of the production analytics solution/system.	23
Task 6.6: Actively support deployment validation and verification, including production data flows.	23

DOMAIN VII: ANALYTICS SOLUTION LIFECYCLE MANAGEMENT

Task 7.1: Track analytics solution performance	24
Task 7.2: Recalibrate and maintain the analytics solution	24
Task 7.3: Support training activities	25
Task 7.4: Validate the business case for the analytics solution over time	25
Task 7.5: Analyze the side effects of the analytics solution over time	25
Task 7.6: Ensure documentation is complete and/or maintained	25

THE CAP-ESSENTIALS (CAP-E) EXAM BLUEPRINT EXPLAINED

All Certified Analytics Professional (CAP®) exam blueprint testing objectives are derived from the INFORMS Analytics Framework (IAF™). This framework details specific analytics roles, responsibilities and tasks essential for successfully applying analytics to challenging problems and opportunities enabling impactful business decisions.

The INFORMS Analytics Framework describes seven core Domains of knowledge, detailing tasks necessary for professional success within an analytics team. Using the INFORMS Analytics Framework as a guide, each element of the IAF is broken down into sub-tasks used to define the testing objectives for the CAP-Essentials exam.

Practice Analysis 2024

This document represents a delineation of common or typical tasks performed by advanced Analytics Professionals across the complete analytics life cycle. The exam blueprint defines the current knowledge, skills, and abilities (KSAs) that must be demonstrated by analytics professionals to conduct effective and successful analytics projects. INFORMS upholds stringent guidelines for the construction of our certification exams. A panel of subject matter experts (SMEs) with diverse analytics backgrounds collaborated to develop the lists of tasks performed by entry-level and early-career analysts on the job, tasks that lead to analytics project success. The KSAs were validated by a larger audience of experts and rated for their frequency of use and importance to analytics project success. This “blueprint” outlines the Domain knowledge tested on the INFORMS CAP-Essentials (CAP-E) examination.

We recognize that in the course of analytics work, these tasks are often performed multiple times as part of ongoing feedback loops, with modifications made with each iteration based on data, findings, and results. For clarity and simplicity, most of the feedback loops are not presented in this document. It is assumed and understood that they are a routine part of practice.

Validation

The findings of this working group were then validated by a sample of practicing analytics professionals. Feedback from this survey resulted in slight modifications of the performance Domains, tasks, and knowledge that comprise the test blueprint that determines the content of the CAP examination. The table below includes the final Domains and their representation on the certification exam that were derived from the practice analysis and a review of validation survey recommendations.

Minimally Qualified Candidate Characteristics

There are no criteria to qualify for the CAP-Essentials exam. Anyone can test at this exam level, including those who may work with analytics teams, but do not perform analytics functions themselves. Below are common characteristics of a minimally qualified candidate:

- May or may not have formal education (Certificate, 2-year, Bachelors, etc.)
- No experience is required
- No project experience necessary
- Wide breadth of basic analytics knowledge

CAP-E EXAM BLUEPRINT

The exam covers tasks performed across the entire analytics life cycle. Tasks are categorized into the following seven primary Domains of knowledge.

Domain	Examination Weight ¹
I. Business Problem Framing	16%
II. Analytics Problem Framing	16%
III. Data	19%
IV. Methodology (Approach) Selection	16%
V. Analytics/Model Development	16%
VI. Deployment	9%
VII. Analytics Solution Lifecycle Management	8%

¹ The Domain weights shown are based on expert assessments of the importance of tasks and the frequency of their performance. Those weights influence the exam blueprint or the percentage of the exam devoted to each Domain.

DOMAIN I: BUSINESS PROBLEM (QUESTION) FRAMING

INFORMS Analytics Framework: Analytics methodologies are applied to problems, which are sometimes stated as questions. The **Business Problem (Question) Framing** Domain includes activities related to understanding the business problem and relevant questions, as well as evaluating the scope of the problem. The activity may also include the identification of opportunities, challenges, or just an evaluation if a question is well defined. This framing process is essential for ensuring that a clear, actionable problem is defined before seeking solutions. Tasks in this Domain include determining, refining, and clarifying a business problem statement; identifying stakeholders and aligning the stakeholders with the stated business problem statement; and determining whether the problem is amenable to an analytics solution. With agreement on a business problem statement and appropriate sponsor agreement to move forward with a solution, the remaining Domains of the INFORMS Analytics Framework are now applicable.

CAP TESTING OBJECTIVES

Task 1.1: Develop an initial statement of a business problem (question).

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.1.1.1	Identify the difference between business statements.

Task 1.2: Identify all stakeholders and their perspectives.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.1.2.1	Identify the stakeholders.
CAP-E.1.2.2	Identify stakeholders and bystanders.

Task 1.3: Determine if the business problem (question) is amenable to an analytics solution.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E 1.3.1	Identify an example of a simple business problem statement that could be solved with an analytic solution.
CAP-E.1.3.2	Not tested at this level.

Task 1.4: Refine the initial business problem (question) statement until it is clear and concise.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E 1.4.1	Identify the part of a business statement that is unclear.

Task 1.5: Create an initial business case for a solution to the business problem (question).

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.1.5.1	Identify the definition of business benefits.
CAP-E.1.5.2	Identify the definition of business costs.
CAP-E 1.5.3	Identify appropriate questions to determine the current state and operating procedures.
CAP-E.1.5.4	Identify an example of a business benefit or cost.
CAP-E 1.5.5	Identify risks to the business of implementing a solution.
CAP-E.1.5.6	Identify unintended direct consequences of the potential solution.

Task 1.6: Obtain sponsor agreement and stakeholder alignment on the business problem (question) statement.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.1.6.1	Identify an example of required sponsor agreement about the business problem (question) statement.

DOMAIN II: ANALYTICS PROBLEM FRAMING

INFORMS Analytics Framework: The **Analytics Problem Framing** Domain focuses on translating a clearly defined business problem (question) into a structured analytics problem that can be addressed with analytics techniques applied to data. This process ensures that analytical efforts are aligned with business objectives and that outcomes will be relevant and actionable. A significant activity in this Domain is reformulating the business question into an analytics problem, requiring the application of descriptive, predictive, or prescriptive analytics. This translation helps define the type of analytics or model needed.

Another activity is identifying the critical drivers or inputs and determining how they relate to desired outputs, forming the basis for hypothesis testing or model design. To ensure relevance and effectiveness, the Domain includes defining primary success measures, such as accuracy, revenue lift, or operational efficiency gains. Risk identification and mitigation strategies are also important to anticipate challenges such as data limitations or unintended bias. This Domain emphasizes the need for sponsor agreement and stakeholder alignment to ensure buy-in and shared understanding before moving forward with analytics solution development.

By clearly framing the analytics problem, organizations can reduce ambiguity, align technical efforts with strategic goals, and set a solid foundation for model development and implementation.

CAP TESTING OBJECTIVES

Task 2.1: Reformulate the statement of the business problem (question) as an analytics problem statement.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.2.1.1	Identify the most appropriate analytics problem statement.
CAP-E.2.1.2	Identify if the statement is a business problem, analytics problem, both, or neither.
CAP-E.2.1.3	Not tested at this level.

Task 2.2: Develop a proposed set of drivers/inputs and determine how they relate to outputs.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.2.2.1	Identify analytic inputs and outputs.
CAP-E.2.2.2	For a simple business problem statement, identify stated drivers and their relationship to outputs.

Task 2.3: State the set of assumptions related to the analytics problem.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.2.3.1	Identify the explicit assumptions of the business problem that are included in the analytics problem statement.
CAP-E.2.3.2	Identify aspects of the business problem that have been simplified.
CAP-E.2.3.3	Identify the constraints that should be documented in an analytics problem statement.
CAP-E.2.3.4	Not tested at this level.

Task 2.4: Define primary measures of success.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.2.4.1	Identify the appropriate primary measures of success from the analytics problem statement that apply to the business statement.
CAP-E.2.4.2	Identify the primary measures of success of an analytics problem statement.

Task 2.5: Identify baseline performance of the current state.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.2.5.1	Identify how to measure the baseline values of the primary measures of success of the current state.

Task 2.6: Identify risks and mitigation strategies for an effective potential analytics solution implementation.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.2.6.1	Identify risks of an analytics solution.
CAP-E.2.6.2	Identify the most likely bias for a predictive model.
CAP-E.2.6.3	Not tested at this level.

Task 2.7: Obtain sponsor agreement and stakeholder alignment on the Analytics Problem Framing.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.2.7.1	Not tested at this level.
CAP-E.2.7.2	Not tested at this level.

DOMAIN III: DATA

INFORMS Analytics Framework: The **Data** Domain encompasses activities related to identifying the data required and available, ensuring its usability for solving analytics problems; and fulfilling documentation and reporting needs. It also includes the effective utilization of data, maintaining its privacy and security, ensuring proper data transport across systems, and adhering to best practices for data governance. Making data usable includes critical actions applied to the data before it can be used, such as cleaning, harmonizing, transforming, merging/joining and validating data, as well as data quality evaluation. As a critical asset, security, management, and privacy protocols are vital to support business needs to ensure compliance, ethical standards, and trust in output and outcomes from derived data. This Domain also addresses the elements of what data is owned, used, and produced. Understanding the use of data inventory and documentation is incorporated in this Domain to ensure repeatable processes and the ability to manage the volume, velocity, variety, and veracity of data.

CAP TESTING OBJECTIVES

Task 3.1: Identify and prioritize data needs.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.3.1.1	Identify data needs, sources, and acquisition sequence.
CAP-E.3.1.2	Identify issues related to sensitive data and restricted usage in collecting and using data.

Task 3.2: Identify and analyze data sources, including data structures.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.3.2.1	Identify limitations and possible constraints of data, given its attributes, context, and metadata.
CAP-E.3.2.2	Identify characteristics of roles responsible for data governance (data owner, data steward, data custodian).
CAP-E.3.2.3	Identify the source of the data (system of record, a data warehouse/data lake, manually created, curated spreadsheets, user input on a screen, and manually recorded data).
CAP-E.3.2.4	Identify the fundamental strengths and weaknesses of various data architecture.
CAP-E.3.2.5	Identify the data architecture that should be used.
CAP-E.3.2.6	Identify characteristics of a normalized dataset.
CAP-E.3.2.7	Identify which of the 4 Vs (volume, veracity, variety, velocity) are NOT relevant.

Task 3.3: Create a data management plan.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.3.3.1	Identify appropriate ways to handle sensitive data.

Task 3.4: Acquire data.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.3.4.1	Identify techniques that are appropriate for acquiring data.
CAP-E.3.4.2	Identify the risks or ethical implications of acquiring unnecessary or unintended data.
CAP-E.3.4.3	Identify characteristics of lineage, traceability, and version control of data.

Task 3.5: Clean, harmonize, transform, merge/join, and validate data.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.3.5.1	Identify what it means to clean and transform data, and that merging/joining data across sources may require business rules.
CAP-E.3.5.2	Identify common issues in data wrangling, such as missing values, duplicates, redundancy, incorrect/mismatched data types, corrupt data, and default data.

Task 3.6: Assess data quality and identify relationships in the data.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.3.6.1	Identify data quality gaps, including accuracy, completeness, consistency, timeliness, validity, uniqueness, and outliers.
CAP-E.3.6.2	Identify patterns and characteristics of a univariate dataset with data profiling outputs.
CAP-E 3.6.3	Identify common visualizations and their purpose.
CAP-E.3.6.4	Identify the methods to evaluate data quality.

Task 3.7: Document and report data findings (e.g., data quality, impact analysis, results, data management plan).

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.3.7.1	Identify findings in a report about data sets that may affect analysis.

Task 3.8: Validate and update the business and analytics problem statements.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.3.8.1	Identify which finding for univariate data is a quality issue that will result in an update to the analytics problem statement.

DOMAIN IV: METHODOLOGY (APPROACH) SELECTION

INFORMS Analytics Framework: The **Methodology (Approach) Selection** Domain involves selecting the appropriate analytical methods, tools, and technologies to solve the defined analytics problem. This ensures that the chosen approach aligns with the problem type, available data, and resource constraints. The Domain includes identifying suitable analytical techniques based on the nature of the problem, as well as evaluating and selecting the best-fit methods considering available data, timeframes, and organizational resources. The Domain includes the selection of a compatible technology stack to effectively implement the solution.

Choosing the right methodology is critical to delivering valid, scalable, and actionable insights.

CAP TESTING OBJECTIVES

Task 4.1: Determine available and appropriate methods/techniques for the identified problem.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.4.1.1	Identify the methods/techniques used in each type of analytics (descriptive, diagnostic, predictive, and prescriptive).
CAP-E.4.1.2	Identify the characteristics of descriptive/diagnostic analytics methods/techniques.
CAP-E.4.1.3	Identify the characteristics of predictive analytics methods/techniques.
CAP-E.4.1.4	Identify the characteristics of prescriptive analytics methods/techniques.
CAP-E.4.1.5	Not tested at this level.

Task 4.2: Evaluate and select methods/techniques, given the resources and available data.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.4.2.1	Identify the technical and business characteristics and uses of specific methodologies (descriptive, diagnostic, predictive, and prescriptive) and techniques.

Task 4.3: Understand the technical solution architecture.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.4.3.1	Identify which component(s) belong in the selection of technical solutions to implement the methodology.

Task 4.4: Evaluate and select the technology stack.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.4.4.1	Identify characteristics of the technology stack, including databases, analytics software, networking, security, on-premise, cloud, open source vs. proprietary, platforms, etc.
CAP-E.4.4.2	Identify the strengths of a spreadsheet analytics model.

DOMAIN V: ANALYTICS/MODEL DEVELOPMENT

INFORMS Analytics Framework: The **Analytics/Model Development** Domain covers activities related to designing, building, and refining models, as well as documenting and communicating the results. The Domain incorporates designing the model structure, building the appropriate models, and running and evaluating model performance to ensure reliability. It also addresses identifying, using, calibrating, and integrating models as well as the documentation of the model and communication of findings. The Domain emphasizes documenting and communicating findings, including assumptions and limitations, to maintain transparency.

This Domain ensures that models are reliable, well-understood, appropriately tested, and effectively support decision-making.

CAP TESTING OBJECTIVES

Task 5.1: Design the model structure.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.5.1.1	Identify appropriate inputs, outputs, and relationships for simple descriptive/diagnostic analytics models.
CAP-E.5.1.2	Identify appropriate inputs, outputs, and relationships for simple predictive analytics models.
CAP-E.5.1.3	Identify appropriate inputs, outputs, and relationships for simple prescriptive analytics models.

Task 5.2: Build one or more appropriate model(s).

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.5.2.1	Identify the appropriate dependent and independent variables of a predictive model.
CAP-E.5.2.2	Identify the appropriate decision variables, constraints, and objective(s).
CAP-E.5.2.3	Identify an error from a list of candidate errors for a predictive model.
CAP-E.5.2.4	Identify an error from a list of candidate errors for a prescriptive model.

Task 5.3: Run, verify, and evaluate the model performance and outputs.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.5.3.1	Identify the correct interpretation of a descriptive/diagnostic analytics model output.
CAP-E.5.3.2	Identify the appropriate division of training, testing, and validation data for a predictive model.
CAP-E.5.3.3	Identify a correct interpretation of the predictive analytics model output.
CAP-E.5.3.4	Identify the correct verification of the solution of a simple prescriptive analytics model output.
CAP-E.5.3.5	Identify which data or model issue is the cause of an observed bias or unethical outcomes of a simple predictive model.

Task 5.4: Calibrate model and improve data applicability based on client input.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.5.4.1	Identify which data or model issue is the cause of a client concern about the output of a simple predictive analytics model.
CAP-E.5.4.2	Identify which data or model issue is the cause of a client concern about the output of a simple prescriptive analytics model.

Task 5.5: If necessary, integrate multiple models.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.5.5.1	Identify the business purpose of a specific model from a set of candidate purposes.

Task 5.6: Document and communicate model findings, including assumptions, limitations, and constraints.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.5.6.1	Identify appropriate visualization techniques for communicating the results.

DOMAIN VI: DEPLOYMENT

INFORMS Analytics Framework: The **Deployment** Domain covers activities related to delivering the analytics solution and ensuring it is effectively integrated into the business environment. This involves performing business validation of the solution and a report of the validation findings. It includes securing sponsor agreement and stakeholder alignment to proceed with deployment. The deployment activities support the implementation, migration, and testing of the solution for production, ensuring it functions as intended. Analytics plays a key role in this Domain, as it involves validation and verification, working in conjunction with technology management, and production data flows. This Domain also includes the role of analytics in evaluation of deployment challenges to determine best resolution through data, model, technology, or operational environment conditions. This Domain ensures the analytics solution is successfully adopted, integrated, and delivers business value.

CAP TESTING OBJECTIVES

Task 6.1: Perform business validation of the analytics solution.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.6.1.1	Identify the characteristics of validation when performing a business validation of the analytics solution.
CAP-E.6.1.2	Identify a potential ethical analytics risk.

Task 6.2: Deliver business validation report with findings.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.6.2.1	Identify sections that belong in the business validation report.

Task 6.3: Obtain sponsor agreement and stakeholder alignment on moving forward with deployment.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.6.3.1	Not tested at this level.

Task 6.4: Create requirements for a deployed analytics solution, including model, usability, system, and business.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.6.4.1	Identify appropriate requirements for the analytics solution to be used in production.
CAP-E.6.4.2	Not tested at this level.

Task 6.5: Actively support the implementation and testing of the production analytics solution/system.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.6.5.1	Not tested at this level.
CAP-E.6.5.2	Not tested at this level.

Task 6.6: Actively support deployment validation and verification, including production data flows.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.6.6.1	Not tested at this level.

DOMAIN VII: ANALYTICS SOLUTION LIFECYCLE MANAGEMENT

INFORMS Analytics Framework: The **Analytics Solution Lifecycle Management** Domain involves ongoing oversight and calibration to ensure the analytics solution continues to perform effectively and delivers valid results over time that continue to deliver business value. Ongoing training activities are incorporated in this Domain to ensure optimal performance management. The Domain includes tracking solution performance and covering recalibration and maintenance to keep the solution accurate. Other tasks include periodically validating the business case to confirm continued value and ensuring documentation is kept up to date, taking into consideration context, environment, and the need for delivering effective end results. Continuous lifecycle management is critical in sustaining the impact and reliability of analytics solutions.

CAP TESTING OBJECTIVES

Task 7.1: Track analytics solution performance.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.7.1.1	Identify the metrics that monitor analytics solution performance.

Task 7.2: Recalibrate and maintain the analytics solution.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.7.2.1	Not tested at this level.
CAP-E.7.2.2	Not tested at this level.

Task 7.3: Support training activities.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.7.3.1	Identify the type of training about the analytics solution that is needed for an analytics professional audience.

Task 7.4: Validate the business case for the analytics solution over time.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.7.4.1	Identify what has changed over time for the business case.

Task 7.5: Analyze the side effects of the analytics solution over time.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.7.5.1	Identify the importance of reviewing analytic solutions post deployment for unintended consequences.

Task 7.6: Ensure documentation is complete and/or maintained.

CAP-Essentials (CAP-E)	Subtask Description
CAP-E.7.6.1	Identify the types of documentation needed for various analytics methodologies.
