Applied Generative AI for Digital Transformation

We're at the start of another productivity revolution—generative AI. It's producing things we didn't have before.

The Generative AI Landscape and the Future of Productivity

This two week **MIT Professional Education** Live Virtual Course dives into the origins of generative artificial intelligence (AI) and the promising road ahead.

We have surpassed the groundbreaking foundational natural language processing (NLP) stages of the 1960s and the ability to take 2D photos and create 3D assets with 2010's convolutional neural networks (CNNs). Today, generative AI learns and produces in beta development.

But to leverage this groundbreaking technology to its full potential or use it to leverage our full potential, we must challenge the misinformation and misconceptions about this technology.

The next industrial revolution is here, and with it, artificial intelligence and emerging generative AI technology, such as ChatGPT, are being developed to advance innovation and improve aspects of human life.

This Live Virtual Course aims to help you and your organization understand the possibilities through generative AI for optimized productivity.

Artificial Intelligence by the Numbers

63%

of jobs in the United States will be enhanced by AI, compared to only 7% that may be replaced.

Source: cnet.com

56%

of those aware of AI-assisted surgery, consider it a major medical advancement, 22% a minor one, and only 5% don't see it as an advance.

Source: weforum.org

63%

of business decision-makers plan to increase or maintain AI spending despite current economic conditions.

About this Live Virtual Course

Applied Generative AI for Digital Transformation is an intensive and timely two-week program, crafted meticulously to delve into generative AI technologies. It targets their implications and practical applications across various organizational contexts. Delivered through live-virtual online sessions, the course amplifies engaging theory-informed lectures, action-oriented learning activities and assignments that emphasize real-world application.

This course serves a broad audience, ranging from senior leaders and technology heads to managers and professionals across diverse domains such as innovation, sales, product management, marketing, and customer experience. It also welcomes investors interested in potential opportunities offered by generative AI. The course encourages participation across sectors, providing immense value for those aiming to harness generative AI to streamline workflows, drive product innovation, enhance customer experience, and comprehend investment potential.

The interactive learning design incorporates four 45-minute faculty presentations, each followed by a stimulating 45-minute discussion session with faculty members and participants.

3 weeks | 10 hours of effort per week | US$ 3,125

Live Sessions Content

Live session 1 - Tuesday, March 19, 2024 at 12-1:30 pm *attendance is required

- Basic Concepts of AI and Neural Networks
- GitHub Copilot and Impact on Software Development
- Generation of Things that Have Never Existed: Autoencoders and latent spaces
- Concept of Word Embeddings and Why They are Key to LLMs

Mandatory activities

- Assignment: Using AI Chrome Extensions
- Forum: Introduce Yourself
- Forum: Interview with Susan Doniz
- Assignment: The Age of Artificial Intelligence

Optional activies

- Pre-work recommended resources
- Assignment: Designing a Large Language Model App
- Post-work recommended resources

Live session 2 - Friday, March 22, 2024 at 12-1:30 pm *attendance is required

- Basic Architecture of Interacting with LLMs. Role of ChatGPT Web Server
- Chrome extensions for OpenAL
- Plugins for ChatGPT Prime. Advanced Data Analysis
- Prompting ChatGPT and how prompts work
- Enhancing GPT with Vector Databases for Embeddings
- Applications of Generative AI
    - Summarize videos, translate, and summarize transcripts
    - Summarize media
- Deciding whether Generative AI is a good fit for your use case

Mandatory activities

- Assignment: Using Generative AI Tools to Create a Video Summary
- Assignment: Using the Prometheus Chrome Extension for Speech Prompt
- Assignment: Chat GPT Fundamentals and Its Growing Ecosystem
- Forum: Interview with Professor Armando Solar-Lezama

Optional activies

- Pre-work recommended resources
- Assignment: Building a Sales and Support Agent with Langchain
- Post-work recommended resources

Live session 3 - Tuesday, April 2, 2024 at 12-1:30 pm *attendance is required

- The two dimensions of digital transformation capability
- Areas to look for opportunity from GenAI
- Case studies of GenAI in business
- Identifying whether GenAI is right for your application.
- Organizational readiness challenges, and how to overcome them

Mandatory activities

- Forum: Impact of Generative AI Technologies on the Digital Landscape
- Assignment: How Companies are Harnessing Generative AI

Optional activies

- Pre-work recommended resources
- Post-work recommended resources

Live Q and A with course Instructors - Thursday, April 4, 2024, at 12-1:30 pm

MIT Professional Education's renowned instructors will host and conduct a session providing participants with the opportunity to engage in real-time discussions. Participants will be able to ask questions and receive answers in real-time, seek clarifications, or request further information related to the course content.

This session is invaluable for promoting understanding, encouraging diverse perspectives, and facilitating meaningful interactions among participants with different backgrounds and expertise.

Live session 4 - Friday, April 5, 2024 at 12-1:30 pm *attendance is required

- Looking to the future:
  - Fast Deployment of Enterprise Solutions using Prompting – ChatBot Example
  - Prompting vs LLM Refinement

Mandatory activities

- Assignment: Flow of Ideas from the Bottom-Up in Organizations
- Assignment: Draft an Ethics Policy for Your Organization

Optional activies

- Pre-work recommended resources
- Forum: Course Takeaways
- Forum: Interview with Mark Shwartz

Key Takeaways

By the end of this course, participants will:

01 Understand generative AI deeply, including its historical development

02 Discover how diverse domains like art, biology, emotional support, and learning apply Generative AI

03 Comprehend and implement prompt engineering to enhance productivity

04 Learn strategies for automating organizational workflows using Generative AI

05 Understand the dynamics of reinforcement learning and the power of data search in Generative AI

06 Navigate the ethical, compliance, and risk aspects associated with Generative AI

07 Understand potential digital transformation opportunities enabled by generative AI for your organization

08 Understand what it will take – from both technology and culture - to make AI work in your organization.

Skills

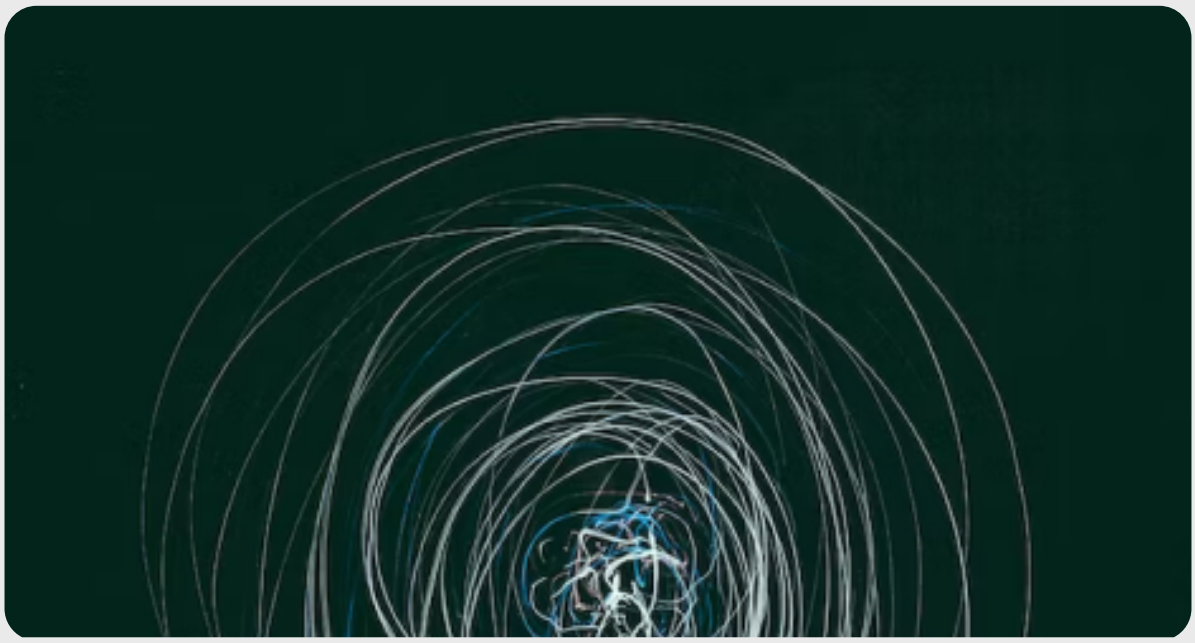

01 Proficiency in using Generative AI tools

02 Application of prompt engineering

03 Automation of workflows using Generative AI

04 Employing Generative AI in domain-specific tasks

05 Understanding and managing Generative AI's organizational implications, both positive and negative

Competencies

01 Proficiency in Generative AI tools

02 Ability to apply Generative AI for productivity and efficiency

03 Understanding the interplay between AI and ethics

04 Strategy and implementation of Generative AI in business-specific domains

05 Proficiency in identifying and managing business opportunities and risks associated with Generative AI

Participant Profile

Prerequisites: No prior background in analytics, computer science, coding or machine learning is required.

Professionals who may benefit from this course:

Senior leaders charged with informing decisions regarding generative AI initiatives for their organizations

---

Technology leaders who want to learn current best practices for adopting and optimizing generative AI systems to boost business outcomes

---

Senior managers and mid-career executives who want to gain insights into the potential applications of generative AI within their organizations

---

Innovation managers, sales and product managers, and marketing and customer experience professionals who want to learn how to leverage generative AI to create new products, new content, and personalized customer experiences

---

Investors in venture capital, private equity, or hedge funds looking to understand investment opportunities created by generative AI

Participants from all industries and sectors are welcome to create a dynamic learning eco-system

Prof. John R. Williams

Professor of Information Engineering, Civil and Environmental Engineering and Director of MIT Geospatial Data Center, and a faculty member in the Center for Computational Science and Engineering part of the Schwarzman School of Computer Science

John Williams holds a BA in Physics from Oxford University, a MS in Physics from UCLA, and a Ph.D. in Numerical Methods from University of Wales, Swansea. His research focuses on the application of Exascale computation to problems in cyber-physical systems, security and energy. His work on fault-tolerant computing using container migration won the IEEE, High Performance Extreme Computing Conference award for Best Innovation in 2019. He is director of MIT's Geospatial Data Center and from 2006-2012, was Director of the MIT Auto-ID Laboratory, where the Internet of Things was invented.

He is author or co-author of over 250 journal and conference papers, as well as the books on Rock Mechanics and RFID Technology.He contributed to the 2013 report for the UK Office for Science Foresight Project- The Future of Manufacturing. Alongside Bill Gates and Larry Ellison, he was named as one of the 50 most powerful people in Computer Networks. He consults to companies including Accenture, Schlumberger, Shell, Total, Exxon, SAP Research, Microsoft Research, Kajima Corp, US Lincoln Laboratory, Sandia National Laboratories, US Intelligence Advanced Research Projects Activity, Motorola, Phillip-Morris Inc., Ford Motor Company, Exxon-Mobil, Shell, Total, and ARAMCO.

His international collaborations include Oxford and Cambridge Universities, HKUST, KACST, Alfaisal University, PolyU Hong Kong, Imperial College of Science and Technology UK, Malaysia University of Science and Technology (MUST), and Masdar Institute of Science and Technology Abu Dhabi. He organized the first Cyber-Physical Security Conference in the UK (2011) and along with Dr. Sanchez, he runs the MIT Applied Cyber Security Professional Education summer course. At MIT he teaches courses Architecting Software Systems (MIT 1.125) and Engineering Computation and Data Science (MIT 1.00/1.001).

In data engineering and data science, early work included simulation of Ford's global network, analysis of SAP smart grid billing system. For Altria, he analyzed the performance of item level tagging and also their implementation of an anti-counterfeiting system using the Electronic Product Code (EPC).

In password security, Dr. Williams was PI that developed the algorithms for a negative password authentication system for the Intelligence Advanced Research Projects Activity (IARPA) agency.

Dr. Williams advises companies in the Americas, Europe, Middle East, and Asia.

"Data engineering builds the corporate nervous system and AI is going to make its reactions smart."

- Web Services and Distributed Computing
- Discrete Element Simulation and Analysis of Discontinua

Courses Taught with MIT Professional Education

- Applied Generative AI for Digital Transformation
- Blockchain: Disruptive Technology
- Cloud & DevOps: Continuous Transformation
- Data Leadership: Transforming the Corporation´s Operations, Management, and Mindset to Leverage Data, AI, and Cloud Computing
- Digital Transformation: From AI and IOT to Cloud, Blockchain, and Cybersecurity

Meet our Instructors

Speakers and topics are subject to change without notice.

Dr. Abel Sanchez

Executive Director of MIT's Geospatial Data Center, Research Scientist; Center for Complex Engineering Systems, Sociotechnical Systems Research Center, under the Schwarzman School of Computer Science

Dr. Sanchez holds a Ph.D. from the Massachusetts Institute of Technology (MIT). He is the Executive Director of MIT's Geospatial Data Center (GDC). His areas of specialty include the Internet of Things (IOT), Big Data, Cybersecurity, and Digital Innovation. He teaches graduate courses in Data Science, Cybersecurity, and Innovation. For the past eight years his research has focused on architecting large-scale computation.

In IOT, Dr. Sanchez led the global network architecture for the Internet of Things at MIT. The design addresses large-scale computation. Compared to the largest numbers in the world, 2 billion computers, 7 billion phones, and 7 billion people, IOT is orders of magnitude bigger. In similar work, Dr. Sanchez directed simulation of the U.S. critical infrastructure with the National Infrastructure Simulation and Analysis Center (NISAC).ia.

In data science, early work included supply chain information engineering, analytics, simulation, and visualization with Wal-Mart, Kraft, and SAP. Dr. Sanchez extended his work to global anti-counterfeiting efforts with Johnson & Johnson, SAP, and Altria. Helping Altria scale track-and-trace using the Electronic Product Code Information Services standard from RFID. The work produced a global infrastructure used by industry and government to this day.

In enterprise computing, Dr. Sanchez led the design of a global data infrastructure simulator, modeling follow-the-sun engineering, to evaluate the impact of competing architectures on the performance, availability and reliability of the system for Ford Motor Company. The simulator modeled user actions, applications, background processes, network load, servers, storage, and global data centers. The work identified data center reductions opportunities estimated at a billion dollars in savings.

In cyber security, Dr. Sanchez directed impact analysis of large-scale cyber-attacks designing Cyber Ranges for the Department of Defense (DOD). Conducting repeatable experiments in impact analysis and the ability to model the cyber environment in a highly portable fashion. Looking at the insider threat Dr. Sanchez led the DOD security study on Enterprise Resource Planning systems across the United States Armed Forces.

In password security, Dr. Sanchez led the design of a password firewall (negative authentication) for the Intelligence Advanced Research Projects Activity (IARPA) agency.

The Negative Filtering or Negative Authentication (NA) approach utilizes a form of complement profiles which resembles the censoring and maturation process of T- cells in the immune system.

In machine learning, addressing financial fraud, Dr. Sanchez designed a situational awareness framework that exploits different perspectives of the same financial data and assigns risk scores to entities (e.g. payment documents) to improve false positive ratios and assist the identification of fraudulent activity in huge and unlabeled financial data in collaboration with Accenture.

In physical security, Dr. Sanchez is developing algorithms to assess risk in the integration of information technology (IT) and operations technology (OT).
Dr. Sanchez is the founder and Chief Software Architect of the Open Source RFID platform project. Dr. Sanchez' software systems are used by Samsung, NEC, NTT, Hitachi, Motorola, SAP, IBM, and Microsoft. Other software initiatives are in use by Sandia National Laboratories, MIT, and by several organizations in East Asia and Europe.
Dr. Sanchez advises companies in the Americas, Europe, Middle East, and Asia.

"We use the term 'applied' because we recognize this as a business problem, but we also wanted to ground the technology and give people fundamentals."

Faculty Contributor

Prof. Armando Solar-Lezama

Professor in MIT's Department of Electrical Engineering and Computer Science; Head of Computer-Assisted Programming Group and Associate Director and COO of MIT Computer Science and Artificial Intelligence Laboratory

Armando Solar-Lezama is a professor in MIT's Department of Electrical Engineering and Computer Science. He is the associate director and COO in the Computer Science and Artificial Intelligence Laboratory (CSAIL), where he leads the Computer Assisted Programming Group. Solar-Lezama and his research group focus on program synthesis, a research area at the intersection of programming systems and artificial intelligence.

He is currently the lead PI of the NSF funded Expeditions project "Understanding the World through Code" and is also the founder of playskript.com, an online platform for creating interactive presentations. Solar-Lezama earned a PhD from University of California, Berkeley.

"Data engineering builds the corporate nervous system and AI is going to make its reactions smart."

MIT Research Contributor

Katie M. Lewis
MIT Research Contributor

Katie M. Lewis received her PhD from MIT in Developing Domain-Specific Generative Models. As a research assistant, she developed the GIST method to generate fine-grained image-specific text descriptions using LLMs. She also developed a learning-based method to align sparse, clinical MRI brain scans with higher accuracy on 92% of subjects and 100x faster on the CPU.

Some of her generative machine learning publications include At the Intersection of Conceptual Art and Deep Learning: The End of Signature, Generating Image-Specific Text for Fine-grained Object Classification, and Machine Learning for Healthcare (ML4H) at NeurIPS 2018.

She recently defended her dissertation under the supervision of John Guttag and Frédo Durand and has interned twice with Ira Kemelmacher-Shlizerman's team at Google.

Industry Contributors

Jacob DePriest

Deputy Chief Security Officer at GitHub

Jacob DePriest is the VP, Deputy Chief Security Officer at GitHub where he is responsible for managing the GitHub Security team. Prior to GitHub, Jacob was a senior executive at the National Security Agency where he built and led the Developer Experience program, was the Agency's executive sponsor for open source, and led a number of IT and security transformation initiatives.

DePriest counts on over 15 years of experience as an engineer in the field of cybersecurity, cloud architecture, and organizing technical teams.

"Developers create world changing innovations every day and yet they still spend a large amount of time creating boilerplate code, tests, fixing security issues, and writing documentation. AI is already accelerating these tasks for developers today and it will continue to help developers around the world focus on the most meaningful work."

Mark Schwartz

CIO and Enterprise Strategist at Amazon

Mark Schwartz is an award-winning CIO currently working as Enterprise Strategist at Amazon Web Services, where he helps senior executives from some of the world's largest companies to formulate strategies and overcome impediments to succeeding in the digital era.

Mark Schwartz is also an accomplished author and his most recent work titled Adaptive Ethics for Digital Transformation touches on how the act of digital transformation requires a change in the moral outlook and ethical assumptions of a business.

In 2010, Mark Schwartz was named one of the Premier 100 IT Leaders by Computerworld Magazine for his contribution in technology leadership, innovative ideas, and effectively managing IT strategies.

Susan Doniz

Chief Information Officer of The Boeing Company and Senior Vice President of Information Technology and Data Analytics

Susan Doniz is the chief information officer of The Boeing Company and senior vice president of Information Technology & Data Analytics, where she leads all aspects of information technology, information security, data and analytics. She also supports the growth of Boeing's business through IT and analytics-related revenue-generating programs. Doniz is a member of the company's Executive Council.

Before joining Boeing in 2020, Doniz was the Group CIO of Qantas Airways, where she expanded the airline's digital ecosystem and adopted new technology to support the needs of the business and its customers.

Previously, during a 17-year career at Procter & Gamble, she led IT and Analytics programs in support of sales, research and development, the supply chain, as well as a cross-functional program to digitize the company. Doniz also worked at SAP, where she was a strategic adviser to the global chief executive officer on transformation and technology issues in support of customers, and Aimia.

"Generative AI can make us all exponentially better at what we do, but it takes human experience and judgment to really thrive. With people at the center of technology, we can use it in the right way that will actually help create a more equalized society and better, sustainable planet."

Course Outline

Live Session 1

1. The history and language of AI
2. Developing software at the speed of thought: GitHub Copilot and other applications
3. Autoencoders and latent spaces
4. The history of productivity revolutions: Data technology
5. Conversational interfaces
6. Transforming workflows: generative AI in art, biology, emotional support, and learning
7. Using prompt engineering to increase your productivity

Live Session 2

1. Chrome extensions for OpenAI
2. Prompting ChatGPT and how prompts work
3. Automating workflows in your corporation
4. Domain-specific automation using generative AI
5. Agent chains
6. Applications of generative AI:
   - Summarize videos, translate, and summarize transcripts
   - Summarize media
   - Extract information from job postings
   - Automate research
   - Classify business inquiries from e-mails
   - Answer questions over knowledge bank
   - Cluster social media posts and podcast episodes into topic

Live Session 3

1. Reinforcement learning
2. Democratization of data using generative AI
3. Harnessing data search with generative AI
4. Analytics using generative AI
5. Conversational data insights

Live Session 4

1. Language models
2. Game trees and Monte Carlo algorithms
3. Adversarial AI, MLOps, and patch attacks
4. Ethics: What are the risks involved with generative AI?
5. Compliance: What are the emerging regulations?
6. Agile ethics: Ethics for the fast-moving corporation
7. The role of the chief ethics officer and an ethics operational framework

*Course content may change for academic reasons.

REGISTER

Certificate of Completion

All participants who successfully complete Applied Generative AI for Digital Transformation will receive a MIT Professional Education Certificate of Completion. In addition, they will also earn 2.0 Continuing Education Unit (MIT CEUs).

In order to obtain CEUs, participants must complete a required CEU confirmation form. CEUs are calculated based on the number of learning hours in each course.

The Continuing Education Unit (CEU) is defined as 10 contact hours of ongoing learning to indicate the amount of time they have devoted to a non-credit/non-degree professional development program. To understand whether or not these CEUs may be applied toward professional certification, licensing requirements, or other required training or continuing education hours, please consult your training department or licensing authority directly.

Welcome to the gateway

to MIT knowledge and expertise for professionals around the world.

About MIT Professional Education

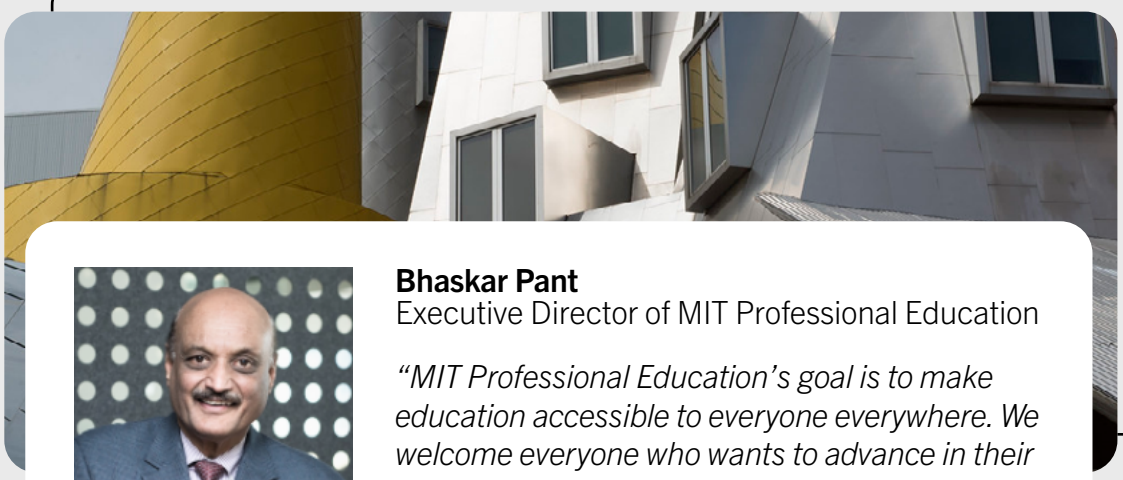

MIT Professional Education fosters the development of innovative leaders equipped to address complex problems globally

MIT Professional Education provides continuing education courses and lifelong learning opportunities for science, engineering, and technology professionals at all levels, from around the world. Worthy of note is that **MIT professors and lecturers lead and teach all MIT Professional Education offerings.** Some of our programs have a long history. Others are relatively new.

Our Digital Plus Programs go beyond online, blending innovative content delivered using the best of online technology and traditional classroom instruction in a flexible, collaborative learning environment.

MIT Professional Education is central to MIT's vision. It fulfills the mandate to connect practitioner-oriented education with industry and incorporate industry feedback and knowledge into MIT education and research.

The Institute is committed to generating, disseminating, and preserving knowledge while working with others to apply this **knowledge for the benefit of humankind.**

Bhaskar Pant
Executive Director of MIT Professional Education

"MIT Professional Education's goal is to make education accessible to everyone everywhere. We welcome everyone who wants to advance in their career or grow their business to unite and be part of the MIT Professional Education all-inclusive community."

Corporate Courses

At MIT Professional Education, we are committed to accompanying organizations as they aspire to provide their professionals with the ongoing education critical for **success in today's competitive environment.** That's why we offer plans for companies who wish to train their professionals with us.

Which program best suits your organization's needs?

1. **Standard Program:**
Teams or groups of at least 10 people will obtain special conditions in their registration for any of our programs.

2. **Custom Programs:**
Custom-made to meet the specific needs of each organization and its professionals.

3. **Private Cohorts:**
Available in Open Enrollment courses with a minimum of participants.

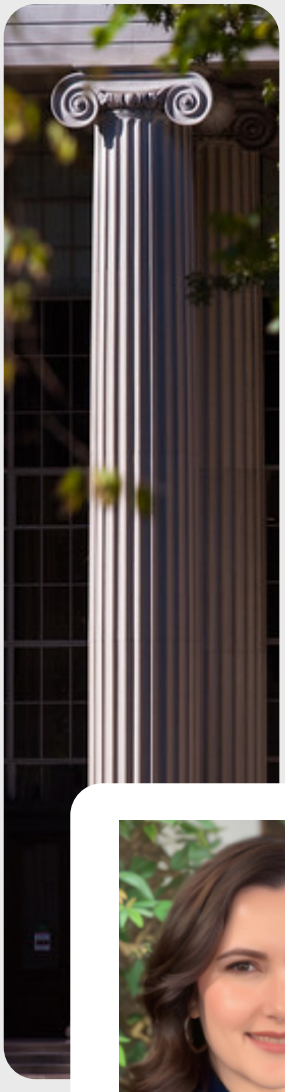

For more information on our Programs for Organizations, please contact us at: professionalprograms@mit.edu

The Beyond Online Methodology

MIT Professional Education is **revolutionizing the digital learning experience.** In fact, we are no longer talking about online-only, but rather an **interactive and collaborative learning experience** that's digitally powered: a **Beyond Online experience.**

You will have access to one of the most innovative e-learning platforms that utilizes the latest technology.You will also have an opportunity to meet and work with some of the world's leading subject matter experts in their respective fields.

With MIT Professional Education, you'll have an opportunity to:

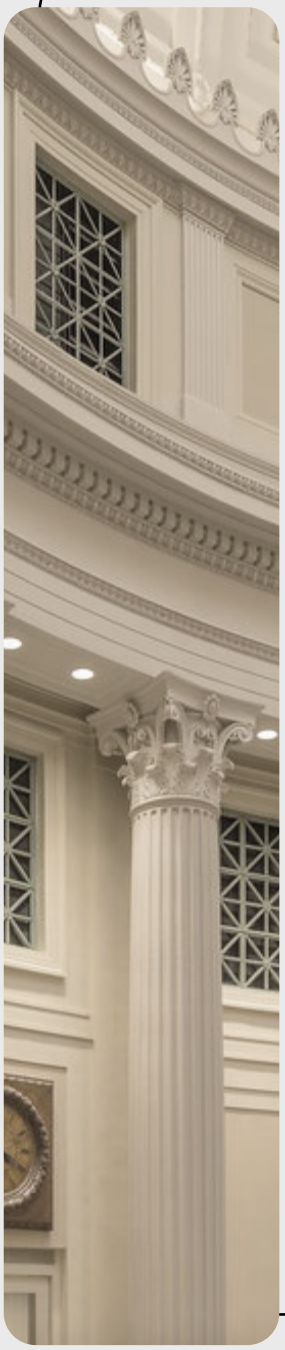

- Attend select live webinars with MIT Instructors
- Collaborate and engage with world-renowned MIT Instructors.
- Learn from expert learning facilitators, guest speakers, and subject matter experts from industries.
- Weekly live webinars from learning facilitators.
- Fulfill your reskilling and upskilling needs in this fast-changing environment.
- Master the technical and human skills necessary for effective leadership.
- Meet and network with other program participants from all around the world.

Clara Piloto
Director of Global Programs at MIT Professional Education

"Our MIT Professional Education programs are designed to connect industry professionals with state-of-the-art technology and leadership expertise in order to efficiently lead their teams through the obstacles associated with digital transformation."

Benefits of Joining the Alumni Community

MIT Professional Education offers a number of benefits for participants who successfully complete our courses:

1. 15% discount for MIT Professional Education online courses and short-duration, in-person programs.
2. Continued access to the virtual campus for six months after completion of the course.
3. Exclusive announcements of new courses, programs, and events through our virtual Alumni Campus: Professional Network.
4. Invitation to the MIT Professional Education Alumni LinkedIn group.
5. Networking opportunities with other MIT Professional Education Alumni.
