About Stanford Online

About Global Alumni

Navigate the strategic decisions behind successful AI transformation

For many organizations, the question is no longer whether to adopt AI, but how to create lasting strategic value from it. Senior leaders are responsible for setting direction, making investment choices, and ensuring that AI initiatives support broader business priorities. Success depends on more than understanding the technology; it requires the judgment to turn AI potential into meaningful business outcomes.

AI is changing how organizations operate and make decisions. Leaders must assess where it can create the greatest value, manage the trade-offs involved, and build alignment across the enterprise. They must also create conditions for innovation without losing sight of accountability and risk.

As generative AI and agentic AI become more embedded in business, executives need a broader strategic perspective. They must be able to identify high-value opportunities, prepare the organization for AI at scale, and put effective governance in place. The ability to connect strategy with execution is becoming a defining leadership capability in AI-driven transformation.

About this program

The **AI for Senior Executives** program from Stanford Online is designed for those responsible for shaping strategy, guiding organizational transformation, and creating long-term enterprise value.

The program explores how AI technologies, including generative AI and agentic AI, are reshaping business models, enterprise operations, and organizational workflows. Participants explore how to identify high-impact opportunities, evaluate strategic trade-offs, manage risk, and design operating models and governance approaches that support scalable and responsible AI adoption.

Combining asynchronous content, online sessions, an applied capstone project, and a 3.5-day on-campus experience* at Stanford University, this integrated learning program brings together perspectives on AI strategy, business models, agentic AI, innovation, leadership, responsible adoption, governance, enterprise controls, organizational design, and futures thinking. Throughout the program, participants examine how to balance AI-driven innovation with safety, ethics, accountability, and long-term enterprise value.

By the end of the program, participants will be equipped to anticipate AI trends, identify emerging opportunities, make informed decisions, align stakeholders, and guide responsible organization-wide transformation.

How the program journey unfolds

PHASE I

AI Landscape and Business Models

Asynchronous + live online

AI landscape • Technology disruption • AI strategy
• AI-driven business models

PHASE III

AI Innovation and Transformation

In person at Stanford University

Innovation in Silicon Valley • Capability building • Organizing for AI • Enterprise transformation • Innovation • Ecosystem considerations • Building enduring success

PHASE V

AI Governance, Enterprise Controls and Program Wrap-Up

Asynchronous + live online

AI risk and safety • AI governance
• AI and trust • Project presentation

PHASE II

AI-Driven Leadership: Strategies for the Future

Asynchronous + online

Predictive analytics • Generative AI
• Agentic AI • Data excellence
• Organizational workflows
• Leadership

PHASE IV

Futures Thinking for Strategic Decision-Making

Asynchronous + online

Futures thinking • Strategic foresight
• Scenario planning • Horizon scanning • Decision-making under uncertainty

Who will benefit from this program?

01

C-suite and senior executives

shaping enterprise strategy in an AI-driven business environment

02

AI and transformation leaders

responsible for AI strategy, business transformation, and long-term value creation

03

Innovation and operations leaders

overseeing innovation, operating models, and organizational capabilities

04

Risk and governance decision makers

responsible for AI governance, enterprise risk, and responsible adoption

05

Business and functional leaders

evaluating AI investments, organizational priorities, and strategic opportunities

**Participants are required to have 10+ years of industry experience.*

During this program, you will learn to

Evaluate AI opportunities and risks across business functions using structured analytical frameworks

Explain the principles of modern AI systems, including generative AI and agentic AI, and their relevance to organizational workflows

Analyze key trade-offs in AI adoption, including considerations of cost, control, speed, and risk

Design appropriate operating models, capabilities, and governance approaches to support scalable and responsible AI adoption

Identify and prioritize AI-enabled innovation opportunities that create new products, services, business models, and sources of competitive advantage

A blended format designed for executive learning

This program combines flexible asynchronous learning, online engagement, and a 3.5-day on-campus immersion at Stanford University. The format is designed to give leaders access to Stanford faculty, strategic AI frameworks, Silicon Valley perspectives, and executive peer exchange while supporting learning alongside professional responsibilities. Sessions, both online and on campus, create opportunities for real-time discussion and relationship building, while asynchronous content allows leaders to engage with core concepts at their own pace.

Learn from Stanford faculty

Gain insights from Stanford faculty at the intersection of AI, strategy, leadership, and organizational transformation. Experience Silicon Valley's innovation ecosystem through exposure to emerging research and young AI startups and explore how new technologies can translate into business opportunities while supporting ethical, safe, and responsible AI adoption at scale.

Responsible AI leadership

Examine AI safety, ethics, trust, governance, and enterprise controls through a senior leadership lens, balancing innovation with accountability and responsible adoption at scale.

Blended learning journey

Engage with a learning format that combines self-paced study, online sessions, and in-person immersion at Stanford University. This structure supports deeper engagement, peer interaction, and applied discussion while giving senior leaders the flexibility to continue managing their professional responsibilities.

Earn three Stanford Online credentials

Receive two digital badges for completing **AI-Driven Leadership: Strategies for the Future** and **Futures Thinking for Strategic Decision-Making**, and a digital Professional Certificate for completing **AI for Senior Executives**.

Your instructors at a glance

Saikat Chaudhuri

Professor of Management Science and Engineering, Stanford University and Academic Director, Stanford Technology Ventures Program (STVP)

Saikat Chaudhuri was the inaugural academic director of the Management, Entrepreneurship & Technology (M.E.T.) Program and the Berkeley Haas Entrepreneurship Hub at the University of California, Berkeley. Saikat's research specializes in corporate growth and innovation strategies, particularly high-tech mergers and acquisitions, high-value outsourcing and partnerships, and technological innovation in dynamic environments. His publications span both scholarly and managerial outlets, and his work has been recognized from the field's leading professional associations including the Academy of Management and Strategic Management Society. He has been the recipient of numerous teaching awards and accolades at all levels across his academic career. Saikat's work has been cited by leading media, and he is often interviewed or quoted by the global press on contemporary business affairs. He is regularly invited to speak at corporate forums, industry events, and academic conferences across the United States, Europe, and Asia. Based on his research and experience, he advises leading global corporations and governments worldwide, including providing expert legal testimony. He earned his bachelor's degrees in mechanical engineering and multinational management from the Jerome Fisher Program in Management & Technology at the University of Pennsylvania, master's degree in manufacturing systems engineering from Stanford University, and a doctorate in technology and operations management from Harvard University.

Melissa Valentine

**Associate Professor of Management
Science and Engineering, Stanford
University**

Melissa Valentine is an associate professor at Stanford University in the Department of Management Science and Engineering and a senior fellow at the Stanford Institute for Human-Centered AI (HAI). She studies how technology is transforming organizations. Recent studies include how experts can develop new capabilities and expertise using algorithms and how managers can use AI and algorithms to design and manage flash teams. Valentine and her collaborators have received best paper awards for research at both management and Human Computer Interaction (HCI) conferences. Her work has been covered in the *New York Times*, the *Wall Street Journal*, *Harvard Business Review*, *Wired*, *Fast Company*, and the *Financial Times*. She holds a bachelor's degree from Stanford University, a master's degree from NYU, and a doctorate from Harvard University. She was recognized with an NSF CAREER award in 2019.

Lisa Kay Solomon

**Associate Professor of Management
Science and Engineering,
Stanford University**

Lisa Kay Solomon is a futurist in residence and lecturer at Stanford's Hasso Plattner Institute of Design (known informally as the Stanford d.school), where she leads futures work and teaches classes like *Inventing the Future* and *View from the Future*. Her courses empower leaders and learners to build agency and navigate complexity. Solomon co-founded civic initiatives such as "Vote by Design" and "All Vote No Play," engaging students and next-gen voters. Currently, she serves on the board of The Long Now Foundation and helped establish the K12 Futures Library at Stanford to promote long-term thinking in education and leadership. She co-authored bestselling books, including *Moments of Impact* and *Design A Better Business*, and created the LinkedIn Learning class *Leader as Futurist*. Through her work, she focuses on fostering innovative thinking and strategic conversations for meaningful change. To enhance the learning experience, Solomon has woven together insights from a diverse array of faculty and industry experts, bringing a wealth of knowledge and perspectives to the course.

Andrew Ng

**Adjunct Professor, Computer Science,
Stanford University**

Andrew Ng is Founder of DeepLearning.AI, Founder and CEO of Landing AI, General Partner at AI Fund, Chairman and Co-Founder of Coursera, and an Adjunct Professor at Stanford University. As a pioneer both in machine learning and online education, Dr. Ng has changed countless lives through his work and research in the field of artificial intelligence.

Diyi Yang

**Assistant Professor of Computer
Science, Stanford University**

Diyi Yang is an Assistant Professor in Computer Science at Stanford University. Professor Yang's research interests are Computational Social Science and Natural Language Processing. Her research goal is to understand the social aspects of language and then build socially aware NLP systems to better support human-human and human-computer interaction. Professor Yang received her PhD from the School of Computer Science, Carnegie Mellon University, and her bachelor's degree from Shanghai Jiao Tong University, China. Her work has received multiple best paper nominations or awards at ICWSM, EMNLP, SIGCHI, ACL, and CSCW. She is a recipient of Forbes 30 under 30 in Science, IEEE "AI 10 to Watch", the Intel Rising Star Faculty Award, Microsoft Research Faculty Fellowship, and NSF CAREER Award.

Mykel Kochenderfer

Associate Professor of Aeronautics and Astronautics, Senior Fellow at the Stanford Institute for Human-Centered AI and Associate Professor, by courtesy, of Computer Science, Stanford University

Mykel Kochenderfer is Associate Professor of Aeronautics and Astronautics at Stanford University. Prior to joining the faculty, he was at MIT Lincoln Laboratory where he worked on airspace modeling and aircraft collision avoidance, with his early work leading to the establishment of the ACAS X program. He received a Ph.D. from the University of Edinburgh and B.S. and M.S. degrees in computer science from Stanford University. Prof. Kochenderfer is the director of the Stanford Intelligent Systems Laboratory (SISL), conducting research on advanced algorithms and analytical methods for the design of robust decision making systems. Of particular interest are systems for air traffic control, unmanned aircraft, and other aerospace applications where decisions must be made in uncertain, dynamic environments while maintaining safety and efficiency. Research at SISL focuses on efficient computational methods for deriving optimal decision strategies from high-dimensional, probabilistic problem representations. He is an author of "Decision Making under Uncertainty: Theory and Application" (2015), "Algorithms for Optimization" (2019), and "Algorithms for Decision Making" (2022), all from MIT Press. He is a third generation pilot.

Rob Reich

McGregor-Girand Professor of Social Ethics of Science and Technology, Senior Fellow at the Stanford Institute for HAI, Professor, by courtesy, of Education, of Philosophy, of Law and Senior Fellow, by courtesy, at the Freeman Spogli Institute, Stanford University

Rob Reich is the McGregor-Girand Professor of Social Ethics of Science and Technology at Stanford University. In 2024-25, Rob was on public service leave as Senior Advisor to the United States Artificial Intelligence Safety Institute.

His scholarship in political theory engages with the work of social scientists and engineers. His newest work is on governance of frontier science and technology. His most recent books are *System Error: Where Big Tech Went Wrong and How We Can Reboot* (with Mehran Sahami and Jeremy M. Weinstein, HarperCollins 2021) and *Digital Technology and Democratic Theory* (edited with Lucy Bernholz and Hélène Landemore, University of Chicago Press 2021). He has also written widely about philanthropy, including *Just Giving: Why Philanthropy is Failing Democracy and How It Can Do Better* (Princeton University Press, 2018) and *Philanthropy in Democratic Societies: History, Institutions, Values* (edited with Chiara Cordelli and Lucy Bernholz, University of Chicago Press, 2016). His early work is focused on democracy and education, including *Bridging Liberalism and Multiculturalism in American Education* (University of Chicago Press, 2002) and *Education, Justice, and Democracy* (edited with Danielle Allen, University of Chicago Press, 2013). He has testified before Congress and written widely for the public, including for the *New York Times*, *Washington Post*, *Wired*, *Time Magazine*, *The Atlantic*, *The Guardian*, and the *Stanford Social Innovation Review*.

Rob is the recipient of multiple teaching awards, including the Walter J. Gores award, Stanford's highest honor for teaching. He was a sixth grade teacher at Rusk Elementary School in Houston, Texas before attending graduate school. He is a board member of the magazine *Boston Review* and at the Spencer Foundation. He helped to create the global movement #GivingTuesday and served as its inaugural board chair.

Jeffrey Hancock

**Harry and Norman Chandler Professor
of Communication and Senior Fellow
at the Freeman Spogli Institute for
International Studies,
Stanford University**

Jeff Hancock is the founding director of the Stanford Social Media Lab and is Harry and Norman Chandler Professor of Communication at Stanford University. Professor Hancock and his group work on understanding psychological and interpersonal processes in social media. The team specializes in using computational linguistics and experiments to understand how the words we use can reveal psychological and social dynamics, such as deception and trust, emotional dynamics, intimacy and relationships, and social support. Recently Professor Hancock has begun work on understanding the mental models people have about algorithms in social media, as well as working on the ethical issues associated with computational social science.

Program outline

Phase I

AI Landscape and Business Models

Format: Asynchronous + Live online | **Instructors:** Saikat Chaudhuri, Diyi Yang, and Andrew Ng

- Intro to the AI landscape
- Navigating tech disruption
- AI strategy
- Disruptive AI-driven business models

Phase II

AI-Driven Leadership: Strategies for the Future

Format: Asynchronous + Online | **Instructor:** Melissa Valentine

- How leaders create conditions for effective integration of predictive analytics
- How leaders create conditions for effective integration of generative AI and agentic AI
- Creating a culture of data excellence
- Configuring workflows and decisions for machine learning (ML)
- Configuring workflows for generative AI and agentic AI
- How the work of managers will change in the age of AI

Phase III

AI Innovation and Transformation

Format: In-person | **Duration:** 3.5 days*

This phase comprises faculty-led academic sessions, practitioner insights, company visits, collaborative discussions, and executive networking. Participants examine topics including organizational design, enterprise transformation, innovation, ecosystem development, corporate venture capital, and leadership in high-uncertainty environments, concluding with individual action planning.

**Explore the sample on-campus agenda to see what participants can expect during the 3.5-day experience.*

Phase IV

Futures Thinking for Strategic Decision-Making

Format: Asynchronous + Online | **Instructor:** Lisa Kay Solomon

- How to lead and make decisions through increasingly uncertain times
 - How to take the long view when the short term can feel overwhelming
 - How to widen your field of view so you don't get blindsided
 - How to use stories to better understand the future
 - How to make our visions of possible futures concrete
 - How to integrate futures into organizational processes for the long haul
-

Phase V

AI Governance, Enterprise Controls and Program Wrap-Up

Format: Asynchronous + Live online | **Instructors:** Saikat Chaudhuri, Mykel Kochenderfer, Rob Reich, and Jeff Hancock

This includes two live online and one asynchronous session.

Program wrap-up capstone presentation: Participants will present their capstone projects, developed throughout the program, showcasing key learnings, outcomes, and practical applications from the program. This final project will be a culmination of the concepts and frameworks explored across each phase to advance an AI initiative relevant to your organization. Built around the pillars of technology, strategy, and organizational readiness, the capstone guides you in developing a practical, implementation-oriented approach that helps move your initiative from vision toward execution.

**Note that faculty are subject to change based on availability.*

On-campus immersion

Join the on-campus experience at Stanford University, designed to extend learning beyond the online format. Through faculty-led sessions, academic and practitioner insights, and executive discussions, participants deepen their understanding of the strategic decisions shaping AI adoption across the enterprise. Equally valuable is the opportunity to engage with a global cohort of senior leaders, exchange perspectives, challenge assumptions, and build relationships that continue to inform executive decision-making long after the program concludes.

What to expect

- Faculty-led sessions
- Executive networking events
- Collaborative learning with a global cohort

** Participants are responsible for their own travel and accommodation during the on-campus immersion.*

On-campus immersion schedule

The 3.5-day on-campus experience is designed to help participants connect strategic AI frameworks with real-world leadership decisions. While the final schedule is subject to change, participants can expect a blend of faculty-led academic sessions, practitioner insights, startup exposure, collaborative discussions, action planning, and executive networking.

Day 1: Organizing for and implementing AI

Participants begin with program introductions and a recap before exploring the power of organizations, organizing for agentic AI, and agentic AI applications.

Day 2: Enterprise transformation and innovation

Sessions focus on enterprise transformation and innovation, including driving innovation, change management, scaling, AI startup perspectives, and reflections on key takeaways.

Day 3: Building capabilities and preparing for growth

Participants examine capability building and ecosystem development, corporate venture capital, practitioner or guest speaker perspectives, AI commercialization, and practical AI applications.

Day 4: Leadership in high- uncertainty environments

The experience concludes with reflections and key takeaways, leadership in high-uncertainty environments, individual development and action planning, and a program recap.

**The on-campus schedule and activities are subject to change.*

Program credentials

All learners who successfully complete this integrated learning journey will earn three Stanford credentials: a digital badge for completing **AI-Driven Leadership: Strategies for the Future**, a digital badge for completing **Futures Thinking for Strategic Decision-Making**, and a digital Professional Certificate for completing the **AI for Senior Executives** program. All three credentials will be verified on the blockchain, allowing you to share your accomplishments with your employer and professional network and communicate the scope of your acquired expertise.

13 CEU-equivalent

The Continuing Education Unit (CEU) is defined as 10 contact hours of ongoing learning to indicate the amount of time they have devoted to a non-credit/non-degree professional development program.

Benefits of joining our community of learners

Join a community of learners with diverse backgrounds and careers dedicated to expanding their leadership abilities. Engage in study groups and collaborative learning opportunities, enhancing your understanding of the field through shared insights and experiences.

Learner benefits

01

Networking opportunities
with fellow program learners

02

15% off on future
Stanford Online in collaboration
with Global Alumni programs
(restrictions apply)

03

Exclusive updates
on new courses, events
and programs

04

Access to the course material
for up to two years after
program completion

About Stanford Online

Stanford Online provides learners worldwide with the opportunity to engage with Stanford teaching and research, deepen their knowledge, gain new skills, and earn a Stanford credential. Its extensive range of courses, designed and delivered by Stanford faculty, is conveniently available in an online format. Experience the excellence of Stanford Online's courses, blending academic rigor, industry focus, an applied learning perspective, and flexible online learning tools for a dynamic and enriching educational experience.

About Global Alumni

Stanford Online is collaborating with online education provider Global Alumni to offer a portfolio of online programs. These programs leverage Stanford Online's leadership in innovation, science, engineering, and technical disciplines developed over years of research, teaching, and practice. Global Alumni collaborates with institutions to manage enrollments (including all payment services and invoicing), technology, and learner support.
