NUS MSBA Programme

As Asia's premier Master's Programme in Business Analytics, we are dedicated to offering students a top-tier education that prepares them to thrive in the dynamic world of data analytics.

Our programme caters to a diverse range of individuals — whether you are a recent graduate eager to sharpen your analytical skills, a professional aiming to pivot into business analytics, or an industry expert seeking to deepen your expertise.

If you are driven by a passion to solve real-world business challenges using data analytics for positive impact, NUS MSBA is the right place to start.

Curriculum Admission Fees Scholarships How to Apply

Students must complete:

0 Units ▶ 0 Courses + 0 Capstone Project

The Professional Consulting Capstone Course will be a year-long course in the form of capstone classes, industry analytics seminars, and a 3 – 6 month full-time^ capstone project.

^Part-time students are recommended to do their capstone project with the company they are working for.

CONSIST OF

5 Essentials

3 Electives

Essential Courses

Students will complete 5 essential courses to build a cross-disciplinary foundation for Business Analytics and engage in rigorous study beyond the assumed disciplinary borders. This covers the interface between computer science, statistics, and other professional disciplines in the NUS Education framework.

Click on each of the essential course* below to find out more.

Analytics in Managerial Economics | Data Management and Warehousing | Operations Research and Analytics

Foundations of Business Analytics | Advanced Analytics and Machine Learning

*This list is subject to change, at the discretion of NUS.

Elective Courses (From 5 Verticals)

In addition to essential courses, students are required to take three elective courses from at most two of the following vertical sectors.

These elective courses will help students delve deeper into understanding different analytic techniques required for specific industry sectors and build upon knowledge, concepts and skills learnt in essential courses. Through these elective courses, students innovate, devise and refine techniques and tools to solve complex problems.

Students who aspire to be a Business Analytics expert in other vertical sectors beyond the five below may take relevant advanced courses from the respective participating faculties, subject to approval by the Academic Committee.

Click on each of the elective vertical sectors* below to find out more.

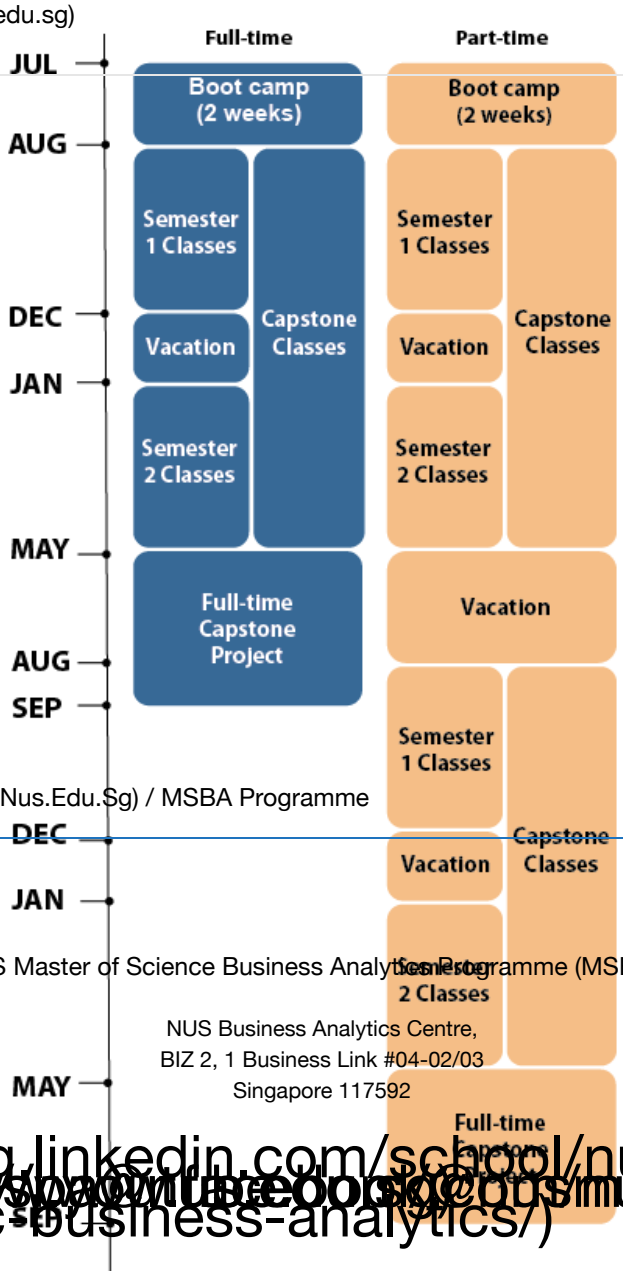

Big Data Analytics Techniques | Consumer Data Analytics | Financial & Risk Analytics

Healthcare Analytics | Statistical Modelling

*This list is not exhaustive and subject to change.
